# MSc in Logic

*Fan Yang, China:*

'Suddenly, I understood why logicians in Amsterdam never get tired: they really enjoy it! The blackboards are always full of formulas and brilliant ideas.'

*Loes Olde Loohuis, the Netherlands:*

'It does not always rain in Amsterdam.'

*Salvador Mascarenhas, Portugal:*

'In Amsterdam, 'interdisciplinarity' is more than just an impressive word: The unifying language and methods of logic make fruitful dialogue and exchange of ideas possible.'

## interdisciplinary, international and individual

- it combines mathematics, computer science, linguistics and philosophy to give a broad view of logic,
- its students come from all continents and many different countries,
- the course programme of each student is individually picked by the student and his or her mentor under consideration of strengths, weaknesses and interests of the student out of a total of over 40 courses.

Interested students with a BSc or BA in a relevant field (for example, mathematics, computer science, philosophy, linguistics, but also many others) should apply. The MSc leads to a highly respected research degree that opens the doors to academic research at the highest level. Most of our graduates continue to get a PhD in logic or a related field.
