Chapter 1

Getting started

This file describes the ILLC Dissertation Style package for typesetting dissertations in LaTeX according to ILLC standards. It describes which files are needed, and how they should be adopted for your dissertation. It also serves as an example of using these files, and as a template for your own dissertation.

The ILLC Dissertation Style file will change the layout of your dissertation to the required ILLC Dissertation Style. It defines a standard layout for the cover and spine of your dissertation, and includes a list of previous publications in the ILLC Dissertation series Furthermore, it redefines the layout of `\chapter`, page heads, and theorem-like environments, and provides predefined theorem-like environments and commands for special sections such as `\acknowledgements`.

If you are already familiar with the standard `book.cls` provided with LaTeX2ϵ, then the ILLC Dissertation Style file should not give you any difficulties: you may use all `book` style commands to prepare your dissertation. For a description of the commands available in the LaTeX2ϵ `book` style we refer you to the *LaTeX User's Guide & Reference Manual* by Leslie Lamport (1986, 1994), Addison-Wesley Publishing Company, Reading, Mass.

1.1 How to proceed

The complete ILLC Dissertation Style package contains the following files:

`illcdiss.cls`: the ILLC Dissertation Style for use with LaTeX2ϵ

`illcdissertations.tex`: file containing data on previous ILLC Dissertations

`illclogo.eps`: this is the ILLC logo; input by `guide_front.tex`

`illc_no_text_logo.eps`: the ILLC logo without text; input by `guide_spine.tex`

`illclogo.pdf`, `illc_no_text_logo.pdf`: PDF versions of the logos, used by `pdflatex` instead of the EPS versions

`guide.tex`: the main latex file for this document

`guide_front.tex`: file describing the official ILLC-Dissertation front matter

`titlepage_from_pedel.pdf`: placeholder for the title page which you will receive from the Bureau Pedel (Office of the Beadle)

`guide_XXX.tex`: file containing the text of section XXX of this document

`guide_spine.tex`: file for preparing the text for the spine of your dissertation

You should make sure that LaTeX is able to find the files `illcdissertations.tex`, `illcdiss.cls`, `illclogo.eps` and `illc_no_text_logo.eps` when you typeset your document with the ILLC Dissertation Style; one way to achieve this is to put all files in the ILLC Dissertation Style package in the directory (or folder) where your dissertation files reside.

Note that the `illcdissertations.tex` file in the archive is automatically updated for any new dissertations: please download the most recent version before sending your dissertation to the printers.

1.2 Invoking the ILLC Dissertation Style

The ILLC Dissertation Style is invoked by replacing "book" by "illcdiss" in the first line of your document. You should also `\include` a *personalized* version of the file `guide_front.tex` after the `\begin{document}` declaration. You also need to `\include` the file `illcdissertations.tex` after the last page of your dissertation:

```
\documentclass{illcdiss}

\begin{document}
\pagestyle{plain}
\pagenumbering{roman}

%%  \include the 'front matter'

\include{guide_front}
\include{guide_dedication}
\tableofcontents
\include{guide_acknowledgements}

%%  now we can start with the real thing

\cleardoublepage
```

```
\pagestyle{headings}
\pagenumbering{arabic}

    <your dissertation>

%%  \include the 'end matter'

\include{guide_bib}
\include{guide_index}
\include{guide_symbols}
\include{guide_samenvatting}
\include{guide_abstract}
\include{guide_curriculum}

%%  finally, \include the list of previous ILLC dissertations

\include{illcdissertations}

\end{document}
```

If your file is already coded with LaTeX you can easily adapt it a posteriori to the ILLC Dissertation Style.

If your document is coded with the ILLC Dissertation Style, you may not be able to typeset it using the standard LaTeX book style without doing some minor recoding, as the ILLC Dissertation Style file defines some comands that are not provided by the standard LaTeX book style.

Please refrain from using any LaTeX or TeX commands that affect the layout or formatting of your document (i.e. commands like `\textheight`, `\hoffset` etc.). The ILLC Dissertation Style has been carefully designed to produce the rightlayout from your LaTeX input. There may nevertheless be exceptional occasions on which to use some of them. If there is anything specific you would like to do and for which neither LaTeX nor the ILLC Dissertation Style file provides a command, *please contact us* (email: illc@uva.nl).

1.3 Personalizing guide_front.tex

The file `guide_front.tex` contains all information needed to produce the front matter of your dissertation according to ILLC standards. You need to personalize `guide_front.tex` by inserting your data at appropriate spots. Additionally, those that print on single-sided printers will want to eliminate the empty page printed after the cover page. All items that need to be personalized in `guide_front.tex` can be found by searching for the string "%PERSONALIZE".

You will receive a version containing a title page from the Bureau Pedel (Office of the Beadle) once your dissertation has been approved by the committee. This should be included as pages (iii) and (iv) of the front matter, using the pdfpages `\includepdf` command. An example file 'titlepage_from_pedel.pdf' is included with the style files. Note that you may wish to temporarily comment out the `\includepdf` command for the version that is sent to your committee, as at that point you will not yet have obtained the proper title page and the example file will list the wrong title.

The files `guide_dedication` and `guide_acknowledgements` contain the optional dedication and acknowledgements, and are `\included` from the main file. You can personalize the text in these files, or simply change the name of the `\included` files in the main file.

1.4 Personalizing `guide_spine.tex`

The file `guide_spine.tex` contains all information needed to produce the spine of your dissertation according to ILLC standards. You need to personalize the file `guide_spine.tex` by inserting your data at appropriate spots. All items that need to be personalized in `guide_spine.tex` can be found by searching for the string "%PERSONALIZE".

Chapter 2

The order of things

According to ILLC standards your dissertation should meet a limited number of requirements concerning its organization and layout. You need hardly worry about details concerning the layout as these are handled by the ILLC Dissertation Style file. The following describes how your dissertation should be organized.

2.1 The cover

The ILLC Dissertation Style only prescribes the font, size and location of the title and author on the cover page. Besides this you are free to design your own cover.

Dissertations formatted according to ILLC standards have a spine displaying the authors name, the title of the dissertation, and the ILLC logo. There is a file called `guide_spine.tex` to help you format your spine text.

2.2 The front matter

The front matter has Roman page numbers (this is achieved by specifying the command `\pagenumbering{roman}` after the `\begin{document}` declaration). The front matter should contain the following material in the following order:

i "franse pagina" containing nothing but the title of your dissertation

ii the "ILLC page" containing the logo and address of ILLC

iii the title page containing the text prescribed by the university

iv this page contains the following information in the following order:

- name and address of your promotor (es)
- when appropriate, an acknowledgment to NWO or its subfoundations

- CIP-gegevens (optional), cataloguing data for the National Library
- a copyright notice
- information concerning the production of your dissertation
- the ISBN code

v (optional) dedication

v (or vii) table of contents

vii (or ix) Acknowledgments, specified by `\acknowledgments`.

The file called `guide_front.tex` helps you format the front matter of your dissertation. Pages (iii) and (iv) will be sent to you by the Bureau Pedel (Office of the Beadle).

2.3 The body of your text

This section contains some information about organizing the main text of your dissertation.

Headings. Headings will be automatically generated by the following codes

```
\chapter
\section
\subsection
\subsubsection
\paragraph
```

The headings produced by `\paragraph` and `\subparagraph` need to be punctuated at the end, as they are followed by the body of the (sub-)paragraph.

Theorem-like environments. In addition to the above headings your text may be structured by theorem-like environments, like lemmas, propositions, conjectures, ... The following theorem-like environments are predefined by the ILLC Disseration Style file: `theorem`, `lemma`, `corollary`, `conjecture`, `proposition`, `definition`, `remark`, `example`, `convention`, `fact` and `question`. They are defined to be numbered consecutively, i.e. typing

```
\begin{lemma}
This is a lemma
\end{lemma}
\begin{proof}
This is a proof\\
```

```
With two lines
\end{proof}
\begin{question}
Is this a question?
\end{question}
```

produces

2.3.1. Lemma. *This is a lemma*

Proof:
This is a proof
With two lines □

2.3.2. Question. Is this a question?

A number of theorem-like environments have italicized text: `theorem`, `lemma`, `corollary`, `conjecture` and `proposition`. All other pre-defined environments have roman text. Inside theorem-like environments text may be emphasized by using `\em`. (In environments with italicized text such as lemma and theorems this will produce text in roman type style; in environments with roman text this produces italicized text.) As a rule of thumb you should always emphasize the terms being defined in a definition.

Special signs and characters. You may need to use special signs. The available ones are listed in the LaTeX *User's Guide & Reference Manual*, pp. 44 ff. If you need other symbols than those, you could use the symbols of the $\mathcal{AMS}$-TeX fonts. The $\mathcal{AMS}$-TeX fonts also contain gothic letters and 'blackboard bold' characters such as IN. Consult your local TeX wizzard for instructions on using the $\mathcal{AMS}$-TeX fonts.

Splitting your input Rather than putting the whole input of a document in a single file, you may wish to split it into several smaller ones. There will always be one file that is the *root* file; it is the one whose name you type when you run LaTeX. The root file of the document you are reading is called `guide.tex`. Other files may be 'included' by the commands `\input` and `\include`. The command `\input{filename}` causes LaTeX to insert the contents of the file `filename.tex` right at the current spot in your manuscript. The command `\include{filename}` does the same, except that the included text will begin and end on its own page (i.e. an automatic `\clearpage` command is issued at the beginning and end of the included file). Additionally, this allows the use of the `\includeonly` command (see the paragraph on saving paper). The `\include` command is the preferred way to include a file containing, for instance, the text of a single chapter.

2.4 The end matter

The end matter should at least contain a Bibliography, a Samenvatting, an Abstract and a list of previous publications in the ILLC Dissertation Series. Note that both a dutch summary and an english abstract are obligatory in english dissertations, according to UvA promotion regulations. Preferably your dissertation also contains an Index. In addition it may contain Appendices, a List of Symbols and your Curriculum Vitae. According to ILLC standards the material should be included in the following order:

- Appendices (optional), see pp. 23, 158 of the LaTeX *User's Guide & Reference Manual* on how to create appendices
- Bibliography (obligatory), specified by

```
\begin{thebibliography}{XX}
  <your list of \bibitems>
\end{thebibliography}
```

- Index, specified by

```
\begin{theindex}
  <your list of entries>
\end{theindex}
```

- List of Symbols (optional), specified by

```
\begin{thesymbols}
  <your list of symbols>
\end{thesymbols}
```

- Samenvatting (obligatory), specified by

```
\samenvatting
  <your Samenvatting>
```

- Abstract (obligatory), specified by

```
\abstract
  <your Abstract>
```

- Curriculum Vitae (optional), specified by

```
\curriculum
  <your CV>
```

- List of previous publications in the ILLC Dissertation Series (obligatory), specified by

  ```
  \include{illcdissertations}
  ```

The end matter of this document has been split into separate files, `included` in the main file. In this document, each file except for `illcdissertations.tex` contains a copy of the corresponding entry from the overview above.

2.5 The spine

You can use the file `guide_spine.tex` to typeset the text on the spine of your dissertation. This text should consist of your name, the title of your dissertation, and the ILLC logo.

The file `guide_spine.tex` produces the text for the spine of your dissertation in a number of sizes. Let your competent printer choose the most appropriate size.

Chapter 3

Producing the final version

This chapter contains some suggestions that you may find useful when producing the final version of your dissertation.

Page dimensions and font size. The ILLC Standard for printed dissertations is a 10 point font and a 240 mm x 170 mm size page (reduced B5 format). The default for the ILLC Dissertation Style is a 12 point font and A4 paper. This is so that you can enhance the appearance of your dissertation by scaling down your camera-ready copy to 81% of its original size. If you have a high resolution printer, you may want to use a font size of 10 or 11 points; the ILLC Dissertation Style determines the page dimensions of your dissertation depending on the the font size you choose, in such a way that the amount of text on a page is the same.

Stellingen. Although you are no longer required to include a leaflet containing Stellingen with your dissertation, you may want to do that anyhow. The following code is a way a producing such a leaflet.

```
\documentstyle[12pt]{guide_diss}
\begin{document}
\begin{center}
{\Huge Stellingen}\\[4ex]
behorende bij het proefschrift\\[4ex]
{\Large\em The ILLC Dissertation Style}\\[2ex]
van\\[2ex]
{\large John B. Goode}
\end{center}
\par\vspace {2.5\baselineskip}
\begin{enumerate}
\item
This Stelling will get my name on national TV.
\item
```

```
And so will this one.
\end{enumerate}
```

Saving paper. If anything, producing a dissertation costs a lot of paper. When working on workstations you can save paper by previewing rather than making printouts. At most sites you can also save paper by using the command `mpage -2 mydissertation.ps` to print 2 pages of your dissertation on a single sheet of paper. The LaTeX command `\includeonly{file1,file2,...}` also allows you to save paper, by allowing you to only print the parts of your document that have changed. The file specified by an `\include` command will only be processed if it appears in the argument of the `\includeonly` command. If it doesn't appear, then it is omitted, but all succeeding text will be processed as if the file had been inserted, numbering pages, sections, equations etc. as if the omitted file's text had been inserted. See also pp. 75–77 of the LaTeX *User's Guide & Reference Manual*.

Font problems. A Latex installation usually includes a program called `dvips` or `dvi2ps` which converts DVI-files generated by Latex to Postscript. However, with the standard settings, the fonts contained in the postscript file will be so-called 'Type 3' (bitmapped) fonts, which are resolution-dependent. This may cause problems when you want to convert your document to PDF format or print it on printers with very high resolutions (such as the printers at a professional printing shop). If you use the `-Ppdf` flag, as in

```
dvips -Ppdf myfile.dvi
```

then the dvips program generates postscript files using 'Type 1' (scalable) fonts (provided these fonts are installed), which should eliminate font problems.

If you want to create a PDF file from a Latex document, the easiest way is to use the dvips program to create a postscript file, and then convert it into a PDF file using the `ps2pdf` script (if installed). However, please note that the `ps2pdf` script uses the GhostScript program, and that versions before Ghostscript 6.0 are *not* capable of handling Type 1 LaTeX fonts. Instead, the fonts are converted them into Type 3 fonts, which (as stated above) can cause problems on printers with very high resolutions. If your Ghostscript version is lower than 6.0 (you can check this by typing `gs --version`), and you cannot convince your System Administrator to update the program, Adobe has an Online Conversion Service which offers free trials.

For more information on font problems, see the ILLC Support page on creating postscript files.

Appendix A

Technical Specifications

This chapter contains the exact specifications of the ILLC Dissertation Style.

Page dimensions By default, the ILLC Dissertation Style uses the options `twoside`, `a4paper` and `12pt`. The left and right margins are equal, as are the top and bottom margins.

Font Size	Text Width	Text Height	Height incl. Head/Foot	Left/Right Margin	Top/Bottom Margin
10 pt	121 mm	182 mm	201 mm	44.5 mm	57.3 mm
11 pt	133 mm	200 mm	222 mm	38.4 mm	45.2 mm
12 pt	145 mm	218 mm	242 mm	32.4 mm	33.1 mm
12 pt (81%)	118 mm	177 mm	196 mm	25.7 mm	26.8 mm

The page head and foot Left-hand pages have the page-number in the upper left corner, and the italized non-uppercase current chapter title in the upper right corner. Right-hand pages have the page-number in the upper right corner, and the italized non-uppercase current section title in the upper left corner. If the `\cleardoublepage` command causes a left-hand page to be empty, that page will have neither page number nor page head.

The chapter head By default, the ILLC Dissertation Style uses the option `openright`. With this option, chapters always start on a right-hand page (using the `\cleardoublepage` command). The first page of a chapter has the pagenumber in the page foot, and an empty page head. Each chapter starts with a blank space (18 pt high at a 12 pt fontsize), the left-aligned boldfaced `Large`-sized chapternumber, a horizontal line, the right-aligned boldfaced `LARGE`-sized chaptertitle, and another blank space (120 pt high at a 12 pt fontsize).

Sectioning commands The commands `\thebibliography` and `\theindex` now produce an entry in the table of contents. The new sectioning commands `\thesymbols`, `\acknowledgements`, `\samenvatting`, `abstract` and `curriculum` are defined. All sectioning commands now produce non-uppercased page heads.

Theorem-like environments All theorem-like environments begin with the number in bold-faced type, 'theorem' (or similar) in small caps, and the optional argument (if any) in a normal fonttype. The theorem-like environments `\theorem`, `\conjecture`, `\lemma` `\proposition` and `\corollary` are predefined and have italicized text. The theorem-like environments `\definition`, `\remark`, `\example`, `\convention`, `\fact` and `\question` are predefined and have non-italicized text. All predefined theorem-like environments are numbered consecutively, within each section.

Miscellaneous The `illcdiss` class loads the `graphicx` package, and defines the commands `\illclogo` and `\illcnotextlogo`. On systems where the `graphicx` package is not available, you can use the `illcdiss-epsfig` class, which loads the `epsfig` package instead. This package is not suitable for use in conjunction with `pdflatex` however.

Bibliography

[1] According to ILLC standards a chapter containing bibliographic references should always be included in your dissertation. It is specified by:

```
\begin{thebibliography}{XX}
  <your list of \bibitems>
\end{thebibliography}
```

[2] L. Lamport. *LaTeX User's Guide & Reference Manual*, Addison-Wesley Publishing Company, Reading, Mass. 1986, 1994.

Index

By preference, your dissertation should contain an index. Instructions on how to produce an index can be found on pages 77–79 of the LaTeX manual. You may specify an index as follows:

```
\begin{theindex}
  <your list of entries>
\end{theindex}
```

List of symbols

This is an optional chapter containing a list of symbols that you use. It is specified by:

```
\begin{thesymbols}
  <your list of symbols>
\end{thesymbols}
```

Samenvatting

According to both ILLC standards and UvA promotion regulations, a chapter containing a summary in Dutch of your dissertation should always be included. It is specified by:

```
\samenvatting
  <your Samenvatting>
```

Abstract

According to both ILLC standards and UvA promotion regulations, an abstract of your dissertation in English should always be included. This chapter may be specified by:

```
\abstract
  <your Abstract>
```

Curriculum Vitae

This is an optional chapter containing your Curriculum Vitae. It is specified as follows:

```
\curriculum
  <your CV>
```

Titles in the ILLC Dissertation Series:

ILLC DS-2017-09: **Miloš Stanojević**
Permutation Forests for Modeling Word Order in Machine Translation

ILLC DS-2018-01: **Berit Janssen**
Retained or Lost in Transmission? Analyzing and Predicting Stability in Dutch Folk Songs

ILLC DS-2018-02: **Hugo Huurdeman**
Supporting the Complex Dynamics of the Information Seeking Process

ILLC DS-2018-03: **Corina Koolen**
Reading beyond the female: The relationship between perception of author gender and literary quality

ILLC DS-2018-04: **Jelle Bruineberg**
Anticipating Affordances: Intentionality in self-organizing brain-body-environment systems

ILLC DS-2018-05: **Joachim Daiber**
Typologically Robust Statistical Machine Translation: Understanding and Exploiting Differences and Similarities Between Languages in Machine Translation

ILLC DS-2018-06: **Thomas Brochhagen**
Signaling under Uncertainty

ILLC DS-2018-07: **Julian Schlöder**
Assertion and Rejection

ILLC DS-2018-08: **Srinivasan Arunachalam**
Quantum Algorithms and Learning Theory

ILLC DS-2018-09: **Hugo de Holanda Cunha Nobrega**
Games for functions: Baire classes, Weihrauch degrees, transfinite computations, and ranks

ILLC DS-2018-10: **Chenwei Shi**
Reason to Believe

ILLC DS-2018-11: **Malvin Gattinger**
New Directions in Model Checking Dynamic Epistemic Logic

ILLC DS-2018-12: **Julia Ilin**
Filtration Revisited: Lattices of Stable Non-Classical Logics

ILLC DS-2018-13: **Jeroen Zuiddam**
Algebraic complexity, asymptotic spectra and entanglement polytopes

ILLC DS-2019-01: **Carlos Vaquero**
What Makes A Performer Unique? Idiosyncrasies and commonalities in expressive music performance

ILLC DS-2019-02: **Jort Bergfeld**
Quantum logics for expressing and proving the correctness of quantum programs

ILLC DS-2019-03: **András Gilyén**
Quantum Singular Value Transformation & Its Algorithmic Applications
